

# Nervous System Capstone Project

	4. Exceeding Standard	3. Standard Met	2. Approaching Standard	1. Standard Not Met
MS-LS1-8 - Life Sciences Gather and synthesize information that sensory receptors respond to stimuli by sending messages to the brain for immediate behavior or storage as memories.	Gathered, synthesized, and evaluated information from multiple authoritative sources that sensory receptors respond to stimuli by sending messages to the brain for immediate behavior or storage as memories. Assessed the evidence and usefulness of each source.	Gathered and synthesized information that sensory receptors respond to stimuli by sending messages to the brain for immediate behavior or storage as memories.	Obtain information that sensory receptors respond to stimuli by sending messages to the brain for immediate behavior or storage as memories.	Understand that sensory receptors respond to stimuli by sending messages to the brain.
